

CYCLE- 4

1. **Create a Graphics package that has classes and interfaces for figures Rectangle, Triangle, Square and Circle. Test the package by finding the area of these figures.**

```
import package_graphics.*;
import java.util.*;
public class main_graphics {
    public static void main(String []args){
        System.out.println("Name: SARANYA MOHAN \n Regno: SJC22MCA-2049 \n
        Course Code:20MCA132 \n Date:16/06/2023");
        package_graphics testObj = new package_graphics();
        int l,h,r,a,c,d;
        Scanner s=new Scanner(System.in);
        System.out.println("Enter the length for rectangle");
        l=s.nextInt();
        System.out.println("Enter the breadth for rectangle");
        h=s.nextInt();
        System.out.println("Enter the radius of circle");
        r=s.nextInt();
        System.out.println("Enter the side for Square");
        a=s.nextInt();
        System.out.println("Enter the breadth for triangle");
        c=s.nextInt();
        System.out.println("Enter the height for triangle");
        d=s.nextInt();
        System.out.println("Area of rectangle:"+testObj.recArea(l,h));
        System.out.println("Area of circle:"+testObj.cirArea(r));
        System.out.println("Area of square:"+testObj.squArea(a));
        System.out.println("Area of triangle:"+testObj.triArea(c,d));
    }
}
```

package_graphics

```
package package_graphics;
interface interface_graphics{
    public float recArea(int l, int h);
    public float cirArea(int r);
    public float squArea(int a);
    public float triArea(int l, int h);
}
public class package_graphics implements interface_graphics {
    public float recArea(int l, int h){
        return l*h;
    }
    public float cirArea(int r){
```

```
return r*r*(float)3.14;
}
public float squArea(int a){
return a*a;
}
public float triArea(int l, int h){
return l*h*(float)(.5);
}
}
```

OUTPUT:

```

- 2. Create an Arithmetic package that has classes and interfaces for the 4 basic arithmetic operations. Test the package by implementing all operations on two given numbers**

```
import java.util.Scanner;
public class Arithmetic
{
    public static void main(String args[])
    {
        System.out.println("Name: SARANYA MOHAN \n Regno: SJC22MCA-2049 \n
        Course Code:20MCA132 \n Date:26/06/2023");
        Scanner s = new Scanner(System.in);
        while(true)
        {
            System.out.println("");
            System.out.println("Enter the two numbers to perform operations ");
            System.out.print("Enter the first number : ");
            int x = s.nextInt();
            System.out.print("Enter the second number : ");
            int y = s.nextInt();
            System.out.println("Choose the operation you want to perform ");
            System.out.println("Choose 1 for ADDITION");
            System.out.println("Choose 2 for SUBTRACTION");
            System.out.println("Choose 3 for MULTIPLICATION");
            System.out.println("Choose 4 for DIVISION");
            System.out.println("Choose 5 for MODULUS");
            System.out.println("Choose 6 for EXIT");
            int n = s.nextInt();
            switch(n)
            {
                case 1:
                    int add;
                    add = x + y;
                    System.out.println("Addition of Two Numbers : "+add);
                    break;

                case 2:
                    int sub;
                    sub = x - y;
                    System.out.println("Subtraction of Two Numbers : "+sub);
                    break;

                case 3:
                    int mul;
                    mul = x * y;
                    System.out.println("Multiplication of Two Numbers : "+mul);
                    break;

                case 4:
```

```
float div;  
div = (float) x / y;  
System.out.print("Division of Two Numbers : "+div);  
break;  
  
case 5:

3. Write a user defined exception class to authenticate the user name and password.

```
import java.util.Scanner;
class authException extends Exception
{
    public authException(String s) {
        super(s);
    }
}
public class userauthentication
{
    public static void main(String[] args) {
        System.out.println("Name: SARANYA MOHAN \n Regno: SJC22MCA-2049 \n
        Course Code:20MCA132 \n Date:16/06/2023");
        String username = "student";
        String passcode = "student123";
        String user_name,password;
        Scanner sc = new Scanner(System.in);
        try
        {
            System.out.println("Enter the username:");
            user_name = sc.nextLine();
            System.out.println("Enter the password:");
            password = sc.nextLine();
            if(username.equals(user_name) && passcode.equals(password))
            {
                System.out.println("Authentication successful...");
            }
            else
            throw new authException("Invalid user credentials");
        }
        catch(authException e)
        {
            System.out.println("Exception caught "+e);
        }
    }
}
```

OUTPUT:

4. Find the average of N positive integers, raising a user defined exception for each negative input.

```
import java.util.Scanner;
class NegException extends Exception
{
    public NegException(String s)
    {
        super(s);
    }
}
public class Average {
    public static void main(String[] args)
    {
        System.out.println("Name: SARANYA MOHAN \n Regno: SJC22MCA-2049 \n
        Course Code:20MCA132 \n Date:21/06/2023");
        int i;
        double sum=0,avg=0;
        Scanner sc=new Scanner(System.in);
        System.out.println("Enter n numbers:");
        int n=sc.nextInt();
        for(i=1;i<=n;i++)
        {
            try
            {
                System.out.println("Enter number"+i);
                int a=sc.nextInt();
                if(a<0)
                {
                    i--;
                    throw new NegException("Negative numbers not allowed, Try again");
                }
                else
                {
                    sum=sum+a;
                }
            }
            catch(NegException e)
            {
                System.out.println("NEGATIVE EXCEPTION OCCURED:"+e);
            }
        }
        avg=sum/n;
        System.out.println("Average is "+avg);
        sc.close();
    }
}
```

OUTPUT:

5. Define 2 classes; one for generating multiplication table of 5 and other for displaying first N prime numbers. Implement using threads. (Thread class).

```
import java.util.Scanner;
class mul extends Thread{
public void run(){
System.out.println("\n");
for(int i =0;i<11;i++){
System.out.println("5*" +i+ " = "+5*i);
}
}
}
class prime extends Thread{
int num;
public prime(int n){
this.num=n;
}
public void run(){
int x, y, flg;
System.out.println("All the Prime numbers within 1 and " + num + " are:");
for (x = 1; x <= num; x++) {
if (x == 1 || x == 0)
continue;
flg = 1;
for (y = 2; y <= x / 2; ++y) {
if (x % y == 0) {
flg = 0;
break;
}
}
if (flg == 1)
System.out.print("\n prime number =" +x + " ");
}
}
}
public class driver {
public static void main(String[] args) {
System.out.println("Name: SARANYA MOHAN \n Regno: SJC22MCA-2049 \n
Course Code:20MCA132 \n Date:26/06/2023");
System.out.println("Enter The number");
Scanner sc = new Scanner(System.in);
int number = sc.nextInt();
mul obj1 = new mul();
obj1.start();
prime obj2 = new prime(number);
obj2.start();
}
}
```

OUTPUT:

```
sjcet@HP-Z238:~/SARANYA/java/cycle4$ java driver
Name: SARANYA MOHAN

Enter The number
5

All the Prime numbers within 1 and 5 are:

  prime number =2
  prime number =3
  prime number =5 5*0 = 0
5*1 = 5
5*2 = 10
5*3 = 15
5*4 = 20
5*5 = 25
5*6 = 30
5*7 = 35
5*8 = 40
5*9 = 45
5*10 = 50
sjcet@HP-Z238:~/SARANYA/java/cycle4$
```

6. Define 2 classes; one for generating Fibonacci numbers and other for displaying even numbers in a given range. Implement using threads. (Runnable Interface).

```
import java.util.Scanner;
class Fib extends Thread{
int f,n1=0,n2=1,n3;
Fib(int c){
this.f=c;
}
public void run(){
System.out.println("fib is "+n1);
System.out.println("fib is "+n2);
for(int i=2;i<this.f;++i) {
n3=n1+n2;
System.out.println("fib is "+n3);
n1=n2;
n2=n3;
}
}
}
class even extends Thread{
int range;
even(int range){
this.range=range;
}
public void run(){
for(int i=0;i<this.range;i++){
if(i%2==0){
System.out.println("even num is "+i);
}
}
}
}
public class mulThread {
public static void main(String [] args){
System.out.println("Name: SARANYA MOHAN \n Regno: SJC22MCA-2049 \n
Course Code:20MCA132 \n Date:21/06/2023");
int c,range;
Scanner sc=new Scanner(System.in);
System.out.println("enter the count of Fibinoooci");
c=sc.nextInt();
Fib fi=new Fib(c);
System.out.println("enter the range of even number");
range=sc.nextInt();
even ev = new even(range);
fi.start();
ev.start();
}
}
```

OUTPUT:

```
